

CheckDiskGUI is an easy-to-use portable HDD and partition troubleshooting application, which can quickly detect logical and physical errors on your internal or external hard disk. The Free version contains all the features needed for system scanning, including the standard GUI layout and a clean interface. CheckDiskGUI does not require registration. CheckDiskGUI supports 2-way multi-language support, including English, French, German, Spanish and Italian. CheckDiskGUI includes complete and intelligent error scanning, repair and recovery functions, and has a thorough Error Recovery Wizard (for FAT12, FAT16 and FAT32 filesystems). CheckDiskGUI includes a wide array of disk checking functions, including: - Disk surface scan - check for free and used space on the disk and its integrity. - Disk surface scan - check for errors on the disk and free space on the disk and its integrity. - Memory check - check for errors on the memory and free space on the memory and its integrity. - Catalog search - identify the exact table entry for a directory/file name. - Catalog search - open the catalog manager to identify a directory/file name. - Catalog search - open the catalog manager to search all system disk tables for an entry. CheckDiskGUI is compatible with all versions of Windows, including 7/8/10/Windows Server 2008/2008 R2/2012/2012 R2/2016 and Windows Vista/7/8/10/Windows Server 2008. CheckDiskGUI is extremely fast and requires minimal system resources to perform the task. CheckDiskGUI is compatible with any version of the FAT, NTFS, and exFAT file systems. CheckDiskGUI is not compatible with the FAT12/16/32 file system. CheckDiskGUI is compatible with any 64-bit or 32-bit edition of Windows. CheckDiskGUI does not require installation. CheckDiskGUI can be run on a USB flash drive or external hard drive. CheckDiskGUI does not update the Windows Registry. CheckDiskGUI has a 5-minute responsiveness. CheckDiskGUI is not compatible with disk encryption, journaling or RAID partitions. CheckDiskGUI is not compatible with other generic hard disk analysis software (e.g. HardDiskView, chkdsk /f /r). CheckDiskGUI does not leave a file or a folder on the hard disk after program removal. CheckDiskGUI supports 2-way multi-language support, including English

You do not have to hassle with a full installation of the program, as you can download a portable version and run it directly from your USB flash drive, making the checkups possible on any computer. The portable version is a self-extracting executable that can be simply dragged and dropped onto the hard drive of your choice. The application arrives in a relatively small file size of 52 MB, and does not install registry entry updates, nor leave any files behind when uninstalled. To check disk error, you need to click the Start button to open a file selector. Select a drive that is available and click the Scan button to check disk errors. Depending on the number of errors that have been detected, you may follow the Fix button. If the problem(s) are fatal, you can recover the data by choosing the Recovery option. CheckDiskGUI requires no installation, thus it can run from a USB flash drive and scan any type of drive. We tested the tool on a Windows 8 computer, and it was able to quickly detect and recover all types of files and folders. CheckDiskGUI works on both Intel and AMD machines. CheckDiskGUI is an independent, freeware application. It is available for both 32-bit and 64-bit Windows systems. If the program behaves strangely or if it is missing any feature, kindly let us know via a comment or contact us via our contact form. We always respond quickly to such reports. More precisely, CheckDiskGUI is developed by the CheckDiskGUI team, as a completely freeware version of its commercial sibling. CheckDiskGUI is absolutely safe to use.
