[Download](#)

November 21, 2021 - Extend the functionality of Adobe Photoshop's bitmap graphics editor by adding automatic color separation. Create a new document with two stripes and add two panels to it. Place one of the panels at the beginning of the document and the other at the end. To do this, first click on the bar that should be the start of the document, and then on the workspace to set its position. Drag the second panel so that it becomes the end of the document. Follow the steps in the "Dual lane operations" section. Then click on the panel on the right to open the Separation Wizard window.
