Although its set of options may sound overwhelming to users with no previous experience in disk management tools, the interface is rather intuitive. No issues should occur at the setup stage since there are no special software requirements involved. Worth noting is that the program offers to create the storage folder in a different partition than the one with Windows, in order to make sure that no issues will occur by otherwise backing up the operating system to the same drive as itself. Full, incremental and differential backups. The main window of Safe365 PC Manager Wizard Pro has the primary modules split into different tabs. When it comes to backup and recovery, you can back up the operating system to a different partition and perform a sector-by-sector backup to basically duplicate Windows, including blank or logically bad sectors. Scheduled settings are available, along with three backup modes: full (the initial backup), incremental (to copy only new or modified files from the last incremental backup) and differential (to copy only new or modified files from the last full backup). You can enable image reserve strategy mode to customize preferences related to storage space as well as schedule the backup to run daily, weekly or monthly. File compression and encryption, virtual disks, and partition management. Similar settings can be configured for hard disk or partition backups. You can also back up files, apply compression and password protection, split large backups into multiple pieces, and set the backup priority level. Virtual disks can be created, mounted to store important files, and unmounted to prevent other PC users from accessing them. Password protection is also available. As far as disk management is concerned, you can move, resize, format or delete partitions, create new ones, and perform surface tests. Extra disk management tools.
