Nanny Ebook has a wonderful selection of free ebooks and gifts for children and family members. "Hooray! Do we get to help out in the 2D visualisation project? Here's the logo I designed for it. :)" Nanny Ebook Logo I really enjoyed seeing all these beautiful icons, and I particularly like the one depicting the sounds an ostrich makes. A company called Onepoint will not provide any freebies anymore, so if you want icons of a particular size, you have to either purchase them, or you have to design them yourself. Why not post links to freebie graphics on the forum? I was thinking this might be the place where everyone can find or post various freebies. I had a lot of fun designing the file icons, as well as the remaining ones. I think I did a pretty good job, but perhaps there's something I could have done a bit better. Any suggestions for improving them would be great. Thanks to everyone who contributed to this project! You can find the icons I have created in the following ZIP file: fileicons.zip And here's what the folder looks like: fileiconsfolder And here's a sample of the icons, which you can get to by clicking on the image below: samplefile

Chegg is a learning experience. It teaches you how to research, how to learn from other people, how to get the information you need, and how to communicate it. It's not just about memorizing information to pass an exam, Chegg is about learning what you don't know and how to go beyond the basics. I love this app because it has all the things that I love about Chegg, and some things that I hadn't even thought of before. The interface is simple and easy to navigate, and allows you to: Understand the concepts

and be able to describe them. Solve problems and explain how you solved them. Understand the underlying concepts. Practice your skills on the application. Be able to communicate. So I love this app because it makes me feel smart when I'm stuck on an assignment, and it makes me feel like I'm a genius when I solve a tough problem. The lessons are so great. They're really comprehensive, and have questions about everything, so you can really use it to your advantage. Plus, you're not just getting the information from the app, you're getting it from the world's leading college database. I love this app because it helps you not only to understand the core concepts of the subject, but also to communicate them. When I've struggled with a problem, I've been able to look up definitions, understand the context, and come up with ways of approaching the problem. This is the kind of learning environment that should be on every student's desk. I recommend this app to any teacher who wants to get their students to understand a subject in a new way. This app is the best app for math because you can do questions online with this application that were not available on the real thing. I love this app because it helps you with homework help on math. This is the most fun app on my phone because you get to play trivia and not just questions, but trivia about all sorts of stuff. Like, the latest celebrity breakup. This app is the best fun app ever because it's way more fun than reading a gossip magazine. It's the most addictive app on my phone because it makes me laugh when I play, and it's super fun to do. I love this app because it's hilarious. The app is very easy to use and I love the fact that you can find questions anywhere and anytime on it. It's also very helpful because you can do 1d6a3396d6

" I know how important your product can be to your business and your customers. I want to ensure that the first impression of your product that users receive is in a positive way." " I know how important your product can be to your business and your customers. I want to ensure that the first impression of your product that users receive is in a positive way."Q: scala methods returning specific types? just learning scala and following the I see methods being declared with a returns type such as: object Ieee754 { def sign(x: Double) : Double = { val y = math.sqrt(x) y \* y + 1 } } How is it that the method returns a Double while the return type of sign is declared as Double? How is the result of  $y * y + 1$  a Double? A: In a nutshell: the return type of a method is determined by what you return inside the method. in Scala, the return type is not expressed as a type, but by a type annotation (called it syntax) methods do not return values, but return an object of the return type of the method. That means the method "returns" this object: val x = 0.0 // using `sign`, so that we have a Double: val y = math.sqrt(x) // multiplying by itself, to get the square:  $y * y$  // adding 1 is also a Double:  $y * y + 1$  The object that is returned is usually implicit in the Java/Scala sense, i.e. it is not possible to call it directly as you can do with a normal method (but it does have a name/symbol in the form of the object that you call the method on): scala> sign(5.0) res0: Double = -4.4408920985006258 But in Scala, you can call any method as if it were a function (note that you don't need to call it explicitly as a function, only the object itself). scala> Math.pow(2,3)
